## A.1 Removed Language Features

### A.1.1 Requirements for removed and deprecated features

For this standard, some features from the language described in *Common Lisp: The Language* have been removed, and others have been deprecated (and will most likely not appear in future Common Lisp standards). Which features were removed and which were deprecated was decided on a case-by-case basis by the X3J13 committee.

*Conforming implementations* that wish to retain any removed features for compatibility must assure that such compatibility does not interfere with the correct function of *conforming programs*. For example, symbols corresponding to the names of removed functions may not appear in the the COMMON-LISP *package*. (Note, however, that this specification has been devised in such a way that there can be a package named LISP which can contain such symbols.)

*Conforming implementations* must implement all deprecated features. For a list of deprecated features, see Section 1.8 (Deprecated Language Features).

### A.1.2 Removed Types

The *type* `string-char` was removed.

### A.1.3 Removed Operators

The functions `int-char`, `char-bits`, `char-font`, `make-char`, `char-bit`, `set-char-bit`, `string-char-p`, and `commonp` were removed.

The *special operator* `compiler-let` was removed.

### A.1.4 Removed Argument Conventions

The *font* argument to `digit-char` was removed. The *bits* and *font* arguments to `code-char` were removed.

### A.1.5 Removed Variables

The variables `char-font-limit`, `char-bits-limit`, `char-control-bit`, `char-meta-bit`, `char-super-bit`, `char-hyper-bit`, and `*break-on-warnings*` were removed.

### A.1.6 Removed Reader Syntax

The “#,” *reader macro* in *standard syntax* was removed.

### A.1.7 Packages No Longer Required

The *packages* LISP, USER, and SYSTEM are no longer required. It is valid for *packages* with one or more of these names to be provided by a *conforming implementation* as extensions.
